USINA CORURIPE
PRODUZINDO ENERGIA PARA A VIDA

Usina Coruripe Reports BRL 292.9 Million in EBITDA year-to-date for the 2026/27 Crop Season

During the first four months of the 2026/27 crop season (April, May, June, and July 2026), Coruripe achieved significant improvements in its operational indicators. These results reflect the quality of the investments made and demonstrate the efficiency of its operating processes. Cumulative sugarcane crushing reached **6.45 million tons**, representing a **7.0% growth** compared to the same period of the previous harvest season, supported by productivity gains, **including a 17.4% increase in TCH (tons of cane per hectare) and a 1.2% improvement in ATR (Total Recoverable Sugar), resulting in approximately 18.8% increase in ATR per hectare**. These results reinforce the competitiveness of the operation and highlight substantial gains in both raw material quality and agricultural performance.

In the industrial segment, the Company maintained its growth trajectory, increasing equivalent sugar production by 9.4%, while ethanol production grew 40.3% compared to the same period of the previous harvest season. This performance demonstrates Coruripe's ability to capture operational gains through a more efficient production mix aligned with market opportunities, further strengthening its competitive position within the industry.

The more challenging pricing environment for the products marketed by the Company limited the conversion of operational gains into revenue and margins throughout the period. Nevertheless, international sugar prices have recently shown signs of recovery. The NY sugar contract has resumed trading above 17 cents/lb and has appreciated by approximately 25% over the past two weeks, driven by the reduction of speculative short positions held by investment funds and more favorable market fundamentals. Against this backdrop, Coruripe delivered a solid operational performance, supported by increased production, agricultural and industrial efficiency gains, and disciplined cost management. This performance reinforces the resilience of the Company's operating model and its ability to generate results even in less favorable market conditions, as reflected in an **Adjusted EBITDA of R$ 292.9 million**.

From a financial perspective, the Company achieved a significant strategic milestone by strengthening its capital structure. The monetization of credits related to the IAA/4870 legal claim generated a liquidity event totaling BRL 1.5 billion, contributing to a substantial reduction in net debt. **Net debt declined from BRL 3.6 billion to BRL 2.8 billion.** In addition to accelerating the deleveraging process, this transaction enhanced the Company's liquidity position, strengthened its financial indicators, and created more favorable conditions for accessing new sources of financing. As a result, Coruripe has gained the financial flexibility necessary to support growth and maintain consistency in operating performance.

In summary, Coruripe enters the 2026/27 crop season supported by solid operating fundamentals, significant productivity gains, and a substantially stronger capital structure. Even in a less favorable pricing environment, the Company continues to demonstrate operational resilience, strong execution capabilities, and enhanced financial flexibility. This positions Coruripe strategically to capture value, strengthen its competitiveness, and sustain growth in the coming cycles.
